Version 3.2.1 Software is now Released for Sale and will be shipping on all 5000 Series products manufactured on or after the 30th November 2003.

Instrument Software Version 3.2.1 New Standard Features

Jobs Pack Enhancements

Enhancements have been made to the following features, Alarms, Totaliser and Counters. It is also now possible to archive on demand via a job.

Increased number of Events and Event buttons

The number of events and event buttons has been increased to 96.

Instrument Software Version 3.2.1 New Optional Features

Event Input Support

The Event Input option offers six isolated event input circuits per board fitted. Triggered externally these discrete inputs can be used initiate internal actions within the 5000 Series Data Acquisition unit.

Product	5100E	5000B	5100V	5180V
Max. No of Boards	Not Available	Two	Two	Four

Security Manager Support

Security Manager is a centralised security system where user names, passwords and settings can be controlled from a central PC. The design is in accordance with the FDA's 21CFR Part 11 and so this gives us another very powerful sales story to the Pharmaceutical Industry. Security Manager will support T800, Review, Eurotherm Suite and all 5000 Series recorders.

Important Note:

Future releases of the 5000 Series tools will not be tested against Windows 95/98. It should also be noted that Security Manager will not function with Windows 95/98.

Ordering Information.

New software features can be ordered using the Instrument Configurator, or for field upgrades by using 5100UPG.

Event Input adder kits are available through the spares configurator SUB51.
